

EDITORIAL

THE BIRTH OF A DREAM

The Journal of Clinical Implants and Surgery (JCIS) was born from the dream of spreading knowledge in the various areas of Dentistry, especially in Implantology, Oral and Maxillofacial Surgery, Periodontics, Dental Prosthetics and Implants, Surgical Anatomy, Imaging, Oral Pathology, Piezoelectricity, biomaterials, as well as new techniques and technologies such as digital and robotic trends.

The editorial team of the Journal of Clinical Implants and Surgery (JCIS) is made up of a group of professors from Brazil and abroad who are passionate about science.

In our experience, we have often found that there are techniques that, although they are interesting and important topics for clinical development, often come up against small details, preventing the dissemination of these techniques and technologies that can be very useful for the dental community and that could solve everyday problems that afflict professionals and their patients.

The purpose of JCIS is to stimulate ideas among readers, bringing together academic science and daily clinical practice so that everyone can benefit from the knowledge and even small clinical tips, without forgetting, of course, the scientific basis.

JCIS receives articles in Portuguese, English and Spanish to strengthen ties in South America and the world.

We believe that knowledge should be free and disseminated to the greatest number of professionals and patients. After all, we are all passengers in this life. Bringing new solutions and improving the quality of life of our fellow human beings is our job.

Happy reading!

Prof. Dr. Marcelo Yoshimoto
